TUSSIVAN Cough Syrup

Quiets Dry cough - Bronchodilator - Antihistaminic

COMPOSITION:

Each 10 ml. (2 teaspoonfuls) contains:

Chlorpheniramine maleate ..... 2 mg.
Ephedrine HCl ..... 5mg.
Phenylephrine HCl ..... 5 mg.
Codeine phosphate ..... 8mg.

PROPERTIES:

The dose of codeine in TUSSIVAN is limited to the amount that raises the threshold of the cough center sufficiently to quiet an overactive reflex but short of preventing stimuli due to the presence of sputum. The intervals between paroxysms of cough are thus lengthened, permitting greater accumulation of fluid so that coughing becomes more productive and less exhausting. Chlorpheniramine, a potent antihistamine with neglicable side effects and the sympathomimetic drugs phenylephrine and ephedrine are combined to decongest irritated nasal and bronchial mucous membranes, relax bronchospasm. reduce discharge, alleviate oedema and other allergic symptoms. by these effects. TUSSIVAN relieves laboured respiration, improves pulmonary circulation and ventilation and affords better conditions for recovery.

INDICATIONS:

- Acute and chronic bronchitis specially when associated with irritation, congestion or bronchospasm.
- Common cold: Influenza and similar upper respiratory tract infections, asthma and whooping cough.

DOSAGE:

from 1 - 5 years	: 0.5 to 1 teaspoonful.
